

## tools of the trade

Tooling Technology LLC is one of the largest suppliers of thermoform tooling and components in North America. Located in Fort Loramie, Ohio, and with over 65,000ft<sup>2</sup> of manufacturing space, the company specialises in high-quality tooling for a variety of material forming processes, including single and twin sheet thermoforming, rotational moulding, blow moulding, pressure form tooling, resin transfer moulding, compression moulding and carpet and metal stamping moulds. It also designs and manufactures assembly fixtures, check fixtures and gauges. The company has full in-house CAD, an aluminium foundry capable of casting stainless steel lines into moulds for temperature control, a full finish and fabrication shop and also covers pattern and model making and CNC machining. Tooling Technology LLC's subsidiary, The Edward D. Segen Company, was founded in 1965, primarily as a manufacturer of tools for the in-line plastics packaging industry. Its founders recognised the need to reduce machine downtime at the point of tooling and mould changes, which led to the development of the quick-change cylinder lock system. The product line has since evolved into a range of precision quick-change systems. These devices are used as a replacement for nuts and bolts throughout the aerospace industry, reducing downtime and increasing productivity by speeding the setup and changeover times of assembly fixtures, testing equipment, forming tools, vibration tables, CNC machining work welding, robotics, automation, dies, jigs and moulds.

## globalsolutions

Global Solution has been supplying high-quality inflight products for more than a decade. The company was founded in 1997 by Ronald von Häfen who has more than 20 years' experience in the airline business. The company is ISO9001-2001 certified, with an experienced team in Germany and China. In 2008, the company opened a new design fashion department in Germany and appointed Anja Meinke as chief product designer. Meinke was previously employed as a fashion designer in Hong Kong and Germany. Global Solution is now able to offer design conception and full out-sourcing solutions. At this year's Aircraft Interiors Expo in Hamburg, the company will be displaying amenity kits, blankets, glasses, headsets, porcelain and rotatable products.
